

# Why Do We Need to Raise Funds for Kidney Cancer Research?

**\*Kidney cancer is one of the most underfunded and under-recognized cancers.**

| CANCER TYPE    | GRANTS GIVEN |
|----------------|--------------|
| Breast         | 162          |
| Lung           | 89           |
| Colon & Rectal | 92           |
| Melanoma       | 58           |
| Kidney         | 13           |

*American Cancer Society: Current Grants by Cancer type given as of March 1, 2018.*

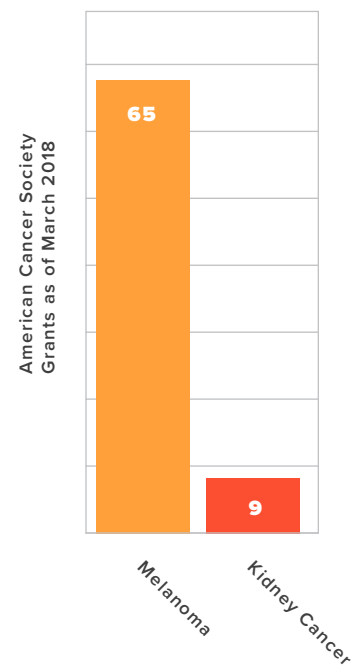

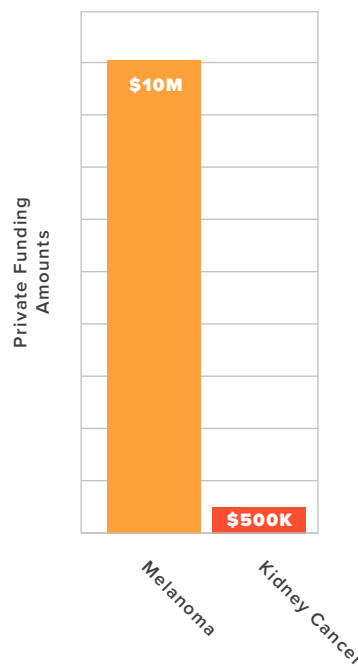

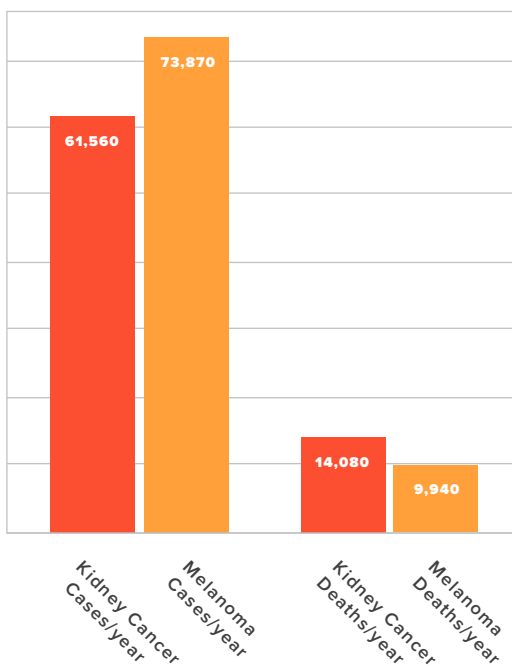

**\*Kidney cancer ranks in the top five for men and top seven for women.**

## Comparing the funding between two cancers:

Melanoma and Kidney cancer have long been considered sister diseases. Both have a dire prognosis and a very poor response to traditional chemotherapy and radiation therapy. Both are among the most responsive of all cancers to Immunotherapy.

Statistics show 40% more patients die from Kidney Cancer each year than Melanoma.

**Please join us in our effort to accelerate Kidney Cancer Research!**
